KEY TERMS		
Issuer:	Royal Bank of Canada	
Issuer Credit Ratings:	Moody's: Aa2; S&P: AA-; DBRS: AA	
Currency:	CAD	
Minimum Investment:	50 Securities or \$5,000	
Term:	Approximately 6 years	
Principal at Risk:	The Securities are not principal protected	
Index:	Return linked to the price performance of the S&P/TSX 60 Index (the " Index "). Securities do not represent an interest in the Index or in the securities of the companies that comprise the Index, and holders have no right or entitlement to such securities, including, without limitation, redemption rights (if any), voting rights or rights to receive dividends or other distributions paid on such securities (the annual dividend yield on the Index as of January 10, 2019 was 3.400%, representing an aggregate dividend yield of approximately 22.211% compounded annually over the six-year term, on the assumption that the dividend yield remains constant).	
Issue Date:	January 31, 2019	
Initial Index Level:	The "Initial Index Level" is the Closing Level on January 28, 2019.	
Final Index Level:	The "Final Index Level" is the Closing Level on January 28, 2025.	
Closing Level:	The " Closing Level " on any date is the official closing level of the Index quoted on http://www.standardandpoors.com for such date, as determined by the Calculation Agent.	
Maturity Date:	January 31, 2025	
Participation Rate:	200.00%, applied only if the Percentage Change is positive.	
Barrier Level:	The " Barrier Level " is 60.00% of the Initial Index Level.	

A final base shelf prospectus containing important information relating to the securities described in this document has been filed with the securities regulatory authorities in each of the provinces and territories of Canada. A copy of the final base shelf prospectus, any amendment to the final base shelf prospectus and any applicable shelf prospectus supplement that has been filed, is required to be delivered with this document. This document does not provide full disclosure of all material facts relating to the securities offered. Investors should read the final base shelf prospectus, any amendment and any applicable shelf prospectus supplement for disclosure of those facts, especially risk factors relating to the securities offered, before making an investment decision.

KEY TERMS CONTINUED

Payment at Maturity:	Payment at maturity will be based on the price performance (or " Percentage Change ") of the Index measured from the Initial Index Level to the Final Index Level and, in the case of a positive Percentage Change only, multiplied by the Participation Rate of 200%. The amount payable (the " Redemption Amount ") on each \$100 Principal Amount per Security at maturity will be determined as follows:		
	If the Percentage Change in the Index is positive , then the Redemption Amount will be:		
	\$100 + (\$100 x Participation Rate x Percentage Change)		
	If the Percentage Change in the Index is zero or negative, declining by 40.00% or less , then the Redemption Amount will be \$100, as the Principal Amount will be fully protected against losses at or above the Barrier Level. If the Percentage Change in the Index is negative, declining by more than 40.00% , then the Redemption Amount will be:		
	\$100 + (\$100 x Percentage Change)		
	All dollar amounts will be rounded to the nearest whole of	cent. The minimum payment at maturity is \$1.00.	
Percentage Change:	The "Percentage Change" is the amount, expressed as a percentage rounded to three decimal places, equal to:		
	(Final Index Level - Initial Index Level) Initial Index Level		
Secondary Market:	Fundserv – RBC2619		
Early Trading Charge Schedule:	If Sold Within the Following No. of Days from the Issue Date	Early Trading Charge (% of Principal Amount)

KEY TERMS CONTINUED

Sample Calculations of the Redemption Amount: (continued)

Example #2 — Calculation of the Redemption Amount where the Percentage Change is zero or negative, declining by 40.00% or less (i.e., the Final Index Level is equal to or above the Barrier Level)

Assuming that the Initial Index Level is 976.18 and the Final Index Level is 927.37, the Redemption Amount would be calculated as follows:

Initial Index Level = 976.18

Final Index Level = 927.37

Percentage Change = (927.37 - 976.18) / 976.18 = -0.0500 or -5.00%

Since the Percentage Change is zero or negative, declining by 40.00% or less (i.e., the Final Index Level is equal to or above the Barrier Level), the Redemption Amount is calculated as follows:

Redemption Amount = \$100.00

In this example, the Redemption Amount provides a return on the Principal Amount equivalent to an annually compounded rate of return of 0.00%.

Example #3 — Calculation of the Redemption Amount where the Percentage Change is positive

Assuming that the Initial Index Level is 976.18 and the Final Index Level is 1,805.93, the Redemption Amount would be calculated as follows:

Initial Index Level = 976.18

Final Index Level = 1,805.93

Percentage Change = (1,805.93 - 976.18) / 976.18 = 0.8500 or 85.00%

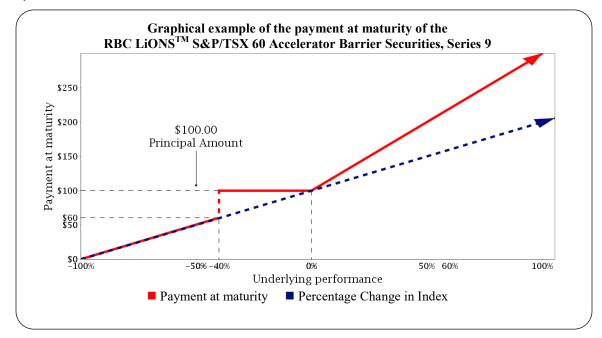

Since the Percentage Change is positive, the Redemption Amount is calculated as follows:

Redemption Amount = $100 + (100 \times 200.00\% \times 85.00\%) = 270.00$

In this example, the Redemption Amount provides a return on the Principal Amount equivalent to an annually compounded rate of return of 18.00%.

GRAPHICAL DESCRIPTION OF THE PAYMENT AT MATURITY

The graph set out below is included for illustration purposes only. The Index levels used to illustrate the calculation of the payment at maturity are not estimates or forecasts of the Initial Index Level and Final Index Level on which the calculation of the Percentage Change, and in turn the Redemption Amount, will depend. This graph shows a limited range of hypothetical returns on the Index and is intended to be representative of that range only. Returns on the Index not shown on the graph are still possible to achieve and the corresponding returns on the Securities should be calculated using the formulas set out in the Pricing Supplement. This graph demonstrates what the return on the Securities will be for a specific return on the Index. There can be no assurance that any specific return will be achieved. All examples assume that a holder of the Securities has purchased Securities with an aggregate Principal Amount of \$100 and that no Extraordinary Event has occurred. The minimum payment at maturity is \$1.00.

All capitalized terms unless otherwise defined have the meanings ascribed to them in the Pricing Supplement.

Clients should evaluate the financial, market, legal, regulatory, credit, tax and accounting risks and consequences of the proposal before entering into any transaction, or purchasing any instrument. Clients should evaluate such risks and consequences independently of Royal Bank of Canada and the Dealers, RBC Dominion Securities Inc. and Laurentian Bank Securities Inc., respectively.

The Securities will not constitute deposits insured under the Canada Deposit Insurance Corporation Act.

4.

The Securities are not fixed income securities and are not designed to be alternatives to fixed income or money market instruments. The Securities are structured products that possess downside risk.

An investment in the Securities involves risks. An investment in the Securities is not the same as a direct investment in the securities that comprise the index to which the Securities are linked and investors have no rights with respect to the securities underlying such index. The Securities are considered to be "specified derivatives" under applicable Canadian securities laws. If you purchase Securities, you will be exposed to changes in the level of the Index and fluctuations in interest rates, among other factors. Index levels are volatile and an investment in the Securities may be considered to be speculative. Since the Securities are not principal protected and the Principal Amount will be at risk, you could lose substantially all of your investment.
