Level:

KEY TERMS	
Issuer:	Royal Bank of Canada
Issuer Credit Ratings:	Moody's: Aa1; S&P: AA-; DBRS: AA
Currency:	CAD
Minimum Investment:	50 Securities or \$5,000
Term:	Approximately 5.0 years
Principal at Risk:	The Securities are not principal protected.
Underlying Index:	The return on the Securities is linked to the performance of the Solactive CVS Health AR 3.05 Index (the "Underlying Index"). The Underlying Index is an adjusted return index that aims to track the gross total return performance of the Solactive CVS Health GTR Index (the "Target Index"), subject to a reduction of a synthetic dividend of 3.05 index points per annum (the "Adjusted Return Factor"). The only constituent securities in the Target Index are the shares of common stock of CVS Health Corporation (the "Constituent Securities" and the "Constituent Securities Issuer", respectively). For the avoidance of doubt, the return on the Securities is linked to the Underlying Index and is not linked to the Target Index or the Constituent Securities. The Closing Level on November 18, 2024 was 55.80. The Adjusted Return Factor divided by the Closing Level was therefore equal to 5.4659% on November 18, 2024. If an Autocall Redemption Event does not occur, over the term of the Securities the sum of the Adjusted Return Factor will be approximately 15.25 index points, representing 27.3297% of the Closing Level on November 18, 2024. For the calculation of the level of the Target Index, any dividends or other distributions paid on the Constituent Securities are assumed to be reinvested on the Constituent Securities. As of November 18, 2024, the annual dividend yield on the Target Index was 4.746%, representing an aggregate dividend yield of approximately 26.092% compounded annually over the term of the Securities, on the assumption that the dividend yield remains constant.
Issue Date:	December 3, 2024.
Initial Index Level:	The Closing Level as published by the Index Sponsor on the Initial Valuation Date.
Initial Valuation Date:	November 22, 2024.
Protection Barrier	70.00% of the Initial Index Level.

A final base shelf prospectus containing important information relating to the securities described in this document has been filed with the securities regulatory authorities in each of the provinces and territories of Canada. The final base shelf prospectus, any applicable shelf prospectus supplement, the Pricing Supplement and any amendment to such documents are accessible through SEDAR+ at www.sedarplus.com. Copies of the documents may also be obtained from www.rbcnotes.com. This document does not provide full disclosure of all material facts relating to the securities offered. Investors should read the final base shelf prospectus, any applicable shelf prospectus supplement, the Pricing Supplement and any amendment to such documents for disclosure of those facts, especially risk factors relating to the securities offered, before making an investment decision.

Event will occur. Autocall Redemption Event: If the Closing Level on an Observation Date immediately preceding an Autocall Redemption Date is greater than or e 100.00% of the Initial Index Level (the "Autocall Redemption Level"), an Autocall Redemption Event will occur. Following the occurrence of an Autocall Redemption Event, the Securities will be redeemed for an amount equal to the Principal Amount thereof (the "Autocall Redemption Amount") on the applicable Autocall Redemption Date. In addition the Autocall Redemption Amount, an Interest Payment will be paid on the Autocall Redemption Date. Autocall Redemption Dates: The dates set out below under the heading "Autocall Redemption Dates", subject to the occurrence of an Extraordina Event and provided that if any Autocall Redemption Date is not a Business Day, such Autocall Redemption Date will infirst following day that is a Business Day. Payment at Maturity: If the Securities have not been previously redeemed, the amount payable on the Maturity Date (the "Final Redemption Amount") for each Security will be: (a) if the Final Index Level is greater than or equal to the Protection Barrier Level, \$100.00; or (b) if the Final Index Level is less than the Protection Barrier Level, an amount equal to the Index Return, but in event not less than \$1.00. Index Return: \$100.00 × (X _f / X _i), where: "X," means the Final Index Level, and "X," means the Initial Index Level. Secondary Market: Fundserv, RBC12006 Generally, to be effective on a Business Day, a redemption request will need to be initiated by 2:00 p.m. (Toronto time that Business Day (or such other time as may be established by Fundserv). Any request received after such time will deemed to be a request sent and received on the next following Business Day.	KEY TERMS CONTINUED

Sample Calculations of Final The following examples show how the return on the Securities would be calculated under different scenarios. These examples are included for illustration purposes only. The performance of the Underlying Index used in the examples is not an estimate or forecast of the performance of the Underlying Index or the Securities. The actual performance of the Underlying Index and the Securities will be different from these examples and the differences may be material. All examples assume that a holder of the Securities has purchased Securities with an aggregate Principal Amount of \$100.00 and that no Extraordinary Event has occurred. For convenience, each vertical line in the charts below represents both a hypothetical Observation Date and the next succeeding Interest Payment Date. Where applicable, dollar amounts are rounded to the nearest whole cent.

Example #1 — Loss Scenario with Payment on the Maturity Date at Less Than the Principal Amount

- Indicates Observation Dates on which the Coupon Barrier Level is breached; therefore no Interest Payment will occur on the related Interest Payment Date.
- Indicates Observation Dates on which there is a Digital Payout Event; therefore an Interest Payment will occur on the related Interest Payment Date.
- Solactive CVS Health AR 3.05 Index

In this scenario, the Closing Level is below the Autocall Redemption Level on all Observation Dates so the Securities would not be redeemed before the Maturity Date. The Closing Level is at or above the Coupon Barrier Level on 4 of the 10 Observation Dates. On the Final Valuation Date, the Final Index Level is below the Protection Barrier Level.

(i) Interest Payments

Digital Payout Events occur on 4 of the 10 Observation Dates. Therefore, an Interest Payment would be payable for 4 Interest Periods on the applicable Interest Payment Date, for total Interest Payments of:

Principal Amount of Securities × 6.3250% per Interest Period × 4 Interest Periods

(ii) Final Redemption Amount

In this example, the Initial Index Level (X_i) is 55.80 and the Final Index Level (X_f) is 27.34. Therefore, the Final Redemption Amount is as follows:

$$100.00 \times (X_f / X_i)$$

Therefore, the total amounts payable per Security from the Issue Date to the Maturity Date are:

- (a) Total Interest Payments: \$25.30
- (b) Final Redemption Amount: \$49.00
- (c) Total amount paid over the term of the Securities: \$74.30

The equivalent annually compounded rate of return in this example is -5.77%.

Sample Calculations: (continued)

Example #2 — Gain Scenario with Payment on the Maturity Date at the Principal Amount

In this scenario, the Closing Level is below the Autocall Redemption Level on all Observation Dates so the Securities would not be redeemed before the Maturity Date. The Closing Level is at or above the Coupon Barrier Level on 5 of the 10 Observation Dates. On the Final Valuation Date, the Final Index Level is at or above the Protection Barrier Level.

(i) Interest Payments

Digital Payout Events occur on 5 of the 10 Observation Dates. Therefore, an Interest Payment would be payable for 5 Interest Periods on the applicable Interest Payment Date, for total Interest Payments of:

Principal Amount of Securities × 6.3250% per Interest Period × 5 Interest Periods

$$100.00 \times 6.3250\% \times 5 = 31.63$$

(ii) Final Redemption Amount

In this example, the Final Index Level is greater than or equal to the Protection Barrier Level. Therefore, the Final Redemption Amount is \$100.00.

Therefore, the total amounts payable per Security from the Issue Date to the Maturity Date are:

- (a) Total Interest Payments: \$31.63
- (b) Final Redemption Amount: \$100.00
- (c) Total amount paid over the term of the Securities: \$131.63

The equivalent annually compounded rate of return in this example is 5.65%.

Sample Calculations: (continued)

Example #3 — Gain Scenario with Autocall Redemption Event

In this scenario, the Closing Level is at or above the Autocall Redemption Level on the Observation Date that falls 24 months into the term of the Securities. This would constitute an Autocall Redemption Event and the Bank would redeem the Securities on the next succeeding Autocall Redemption Date. The Closing Level is at or above the Coupon Barrier Level on 4 Observation Dates prior to the Autocall Redemption Date.

(i) Interest Payments

Digital Payout Events occur on each of the 4 Observation Dates. Therefore, an Interest Payment would be payable for each Interest Period on the applicable Interest Payment Date (including on the Autocall Redemption Date), for total Interest Payments of:

Principal Amount of Securities × 6.3250% per Interest Period × 4 Interest Periods

$$100.00 \times 6.3250\% \times 4 = 25.30$$

(ii) Autocall Redemption Amount

The Autocall Redemption Amount per Security is equal to \$100.00.

Therefore, the total amounts payable per Security from the Issue Date to the Autocall Redemption Date are:

- (a) Total Interest Payments: \$25.30
- (b) Autocall Redemption Amount: \$100.00
- (c) Total amount paid over the term of the Securities: \$125.30

The equivalent annually compounded rate of return in this example is 11.94%.

Initial Estimated Value:

The initial estimated value of the Securities on or about the date of the Pricing Supplement was \$93.62 per Security, which is less than the price to the public and is not an indication of the actual profit to the Bank or its affiliates. The actual value of the Securities at any time will reflect many factors and may be less than this amount. The initial estimated value of the Securities is an estimate only and does not represent a minimum price at which the Bank, RBC DS or any of our affiliates would be willing to purchase the Securities in any secondary market. We describe our determination of the initial estimated value in more detail in the Pricing Supplement.

All capitalized terms unless otherwise defined have the meanings ascribed to them in the Pricing Supplement.

Clients should evaluate the financial, market, legal, regulatory, credit, tax and accounting risks and consequences of the proposal before entering into any transaction, or purchasing any instrument. Clients should evaluate such risks and consequences independently of Royal Bank of Canada and the Dealers, RBC Dominion Securities Inc. ("RBC DS") and Raymond James Ltd., respectively. RBC DS is a wholly-owned subsidiary of the Bank. Consequently, the Bank is a related and connected issuer of RBC DS within the meaning of applicable securities legislation.

The Securities will not constitute deposits insured under the Canada Deposit Insurance Corporation Act or any other deposit insurance regime. The Securities are not fixed income securities and are not designed to be alternatives to fixed income or money market instruments.

An investment in the Securities involves risks. None of Royal Bank of Canada, the Dealers or any of their respective affiliates, associates, or any other person or entity guarantees that holders of Securities will receive an amount equal to their original investment in the Securities or guarantees that any return will be paid on the Securities (subject to the minimum amount payable at maturity of \$1.00 per Security) at or prior to maturity of the Securities. See "Risk Factors" in the base shelf prospectus and "Risk Factors" in the Pricing Supplement. Since the Securities are not principal protected and the Principal Amount will be at risk, you could lose substantially all of your investment.
